Mappa 08: P97 delle celle — almeno 73 asteroidi/cella

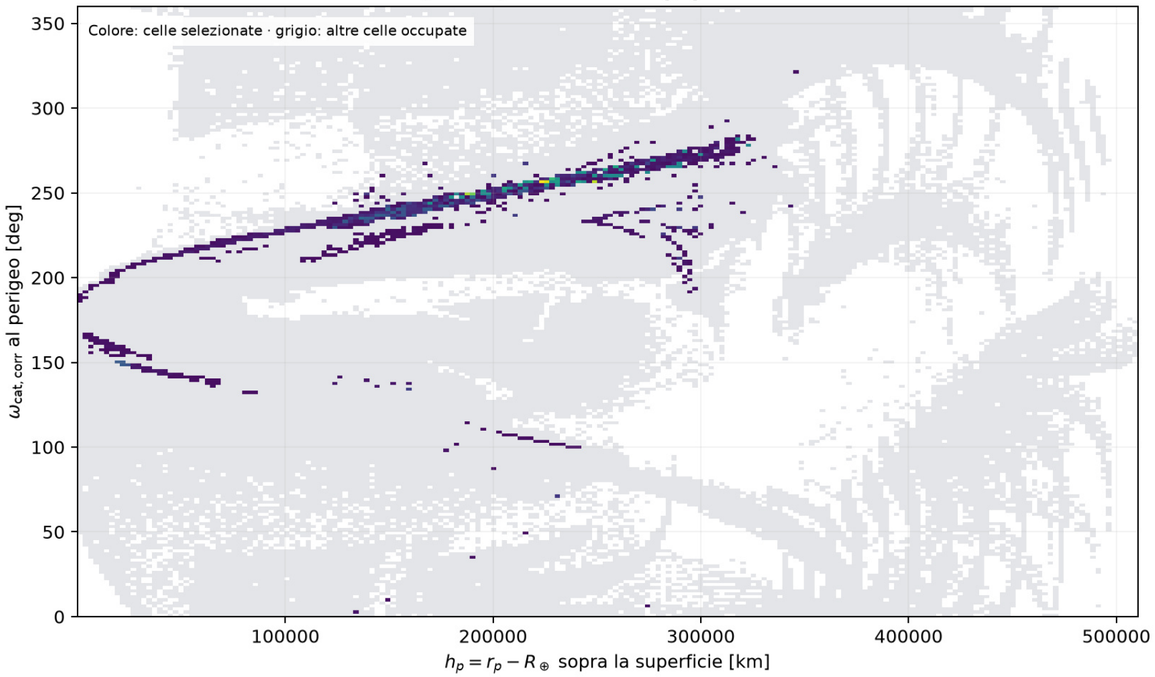

365,406 traiettorie distinte · 292 cluster · griglia 200 × 200 · 201 punti per curva · ω del catalogo corretto per il verso

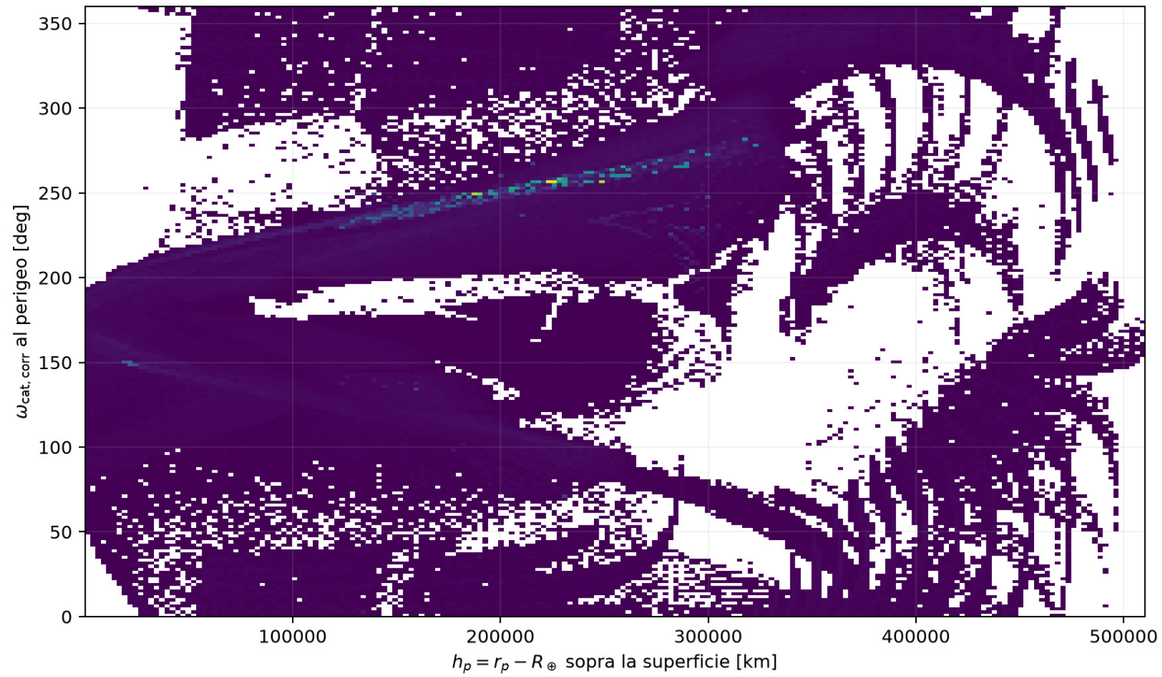

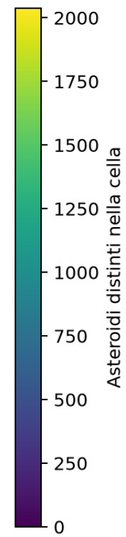

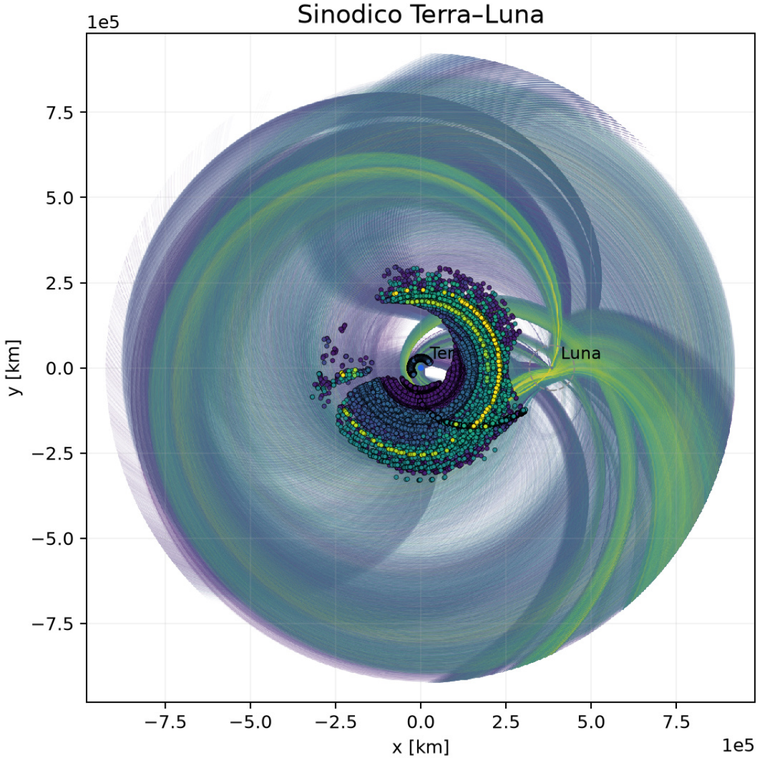

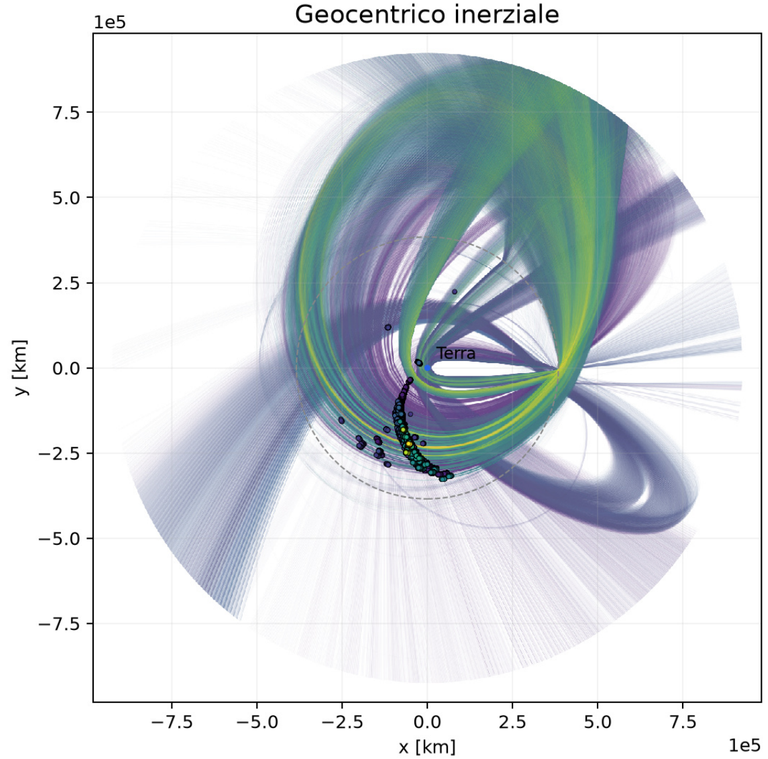

Pallini con bordo nero: perigei salvati, al tempo del perigeo in ciascun riferimento.
Stesse traiettorie e stessi colori nelle tre viste, dal perigeo salvato all'uscita dalla SOI terrestre.
Assi inerziali allineati al sinodico a ETD; nel lunocentrico si sottrae la posizione della Luna a ogni epoca.

Mappa 08: P99 delle celle — almeno 146 asteroidi/cella
78,886 traiettorie distinte · 180 cluster · griglia 200 × 200 · 201 punti per curva · ω del catalogo corretto per il verso

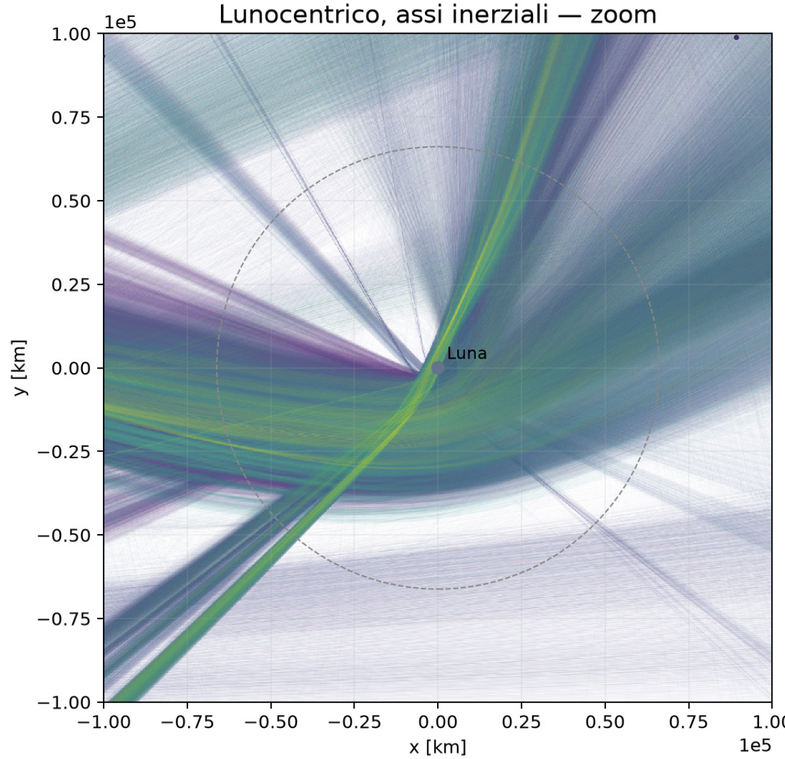

Sinodico Terra–Luna

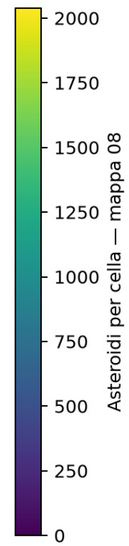

Geocentrico inerziale

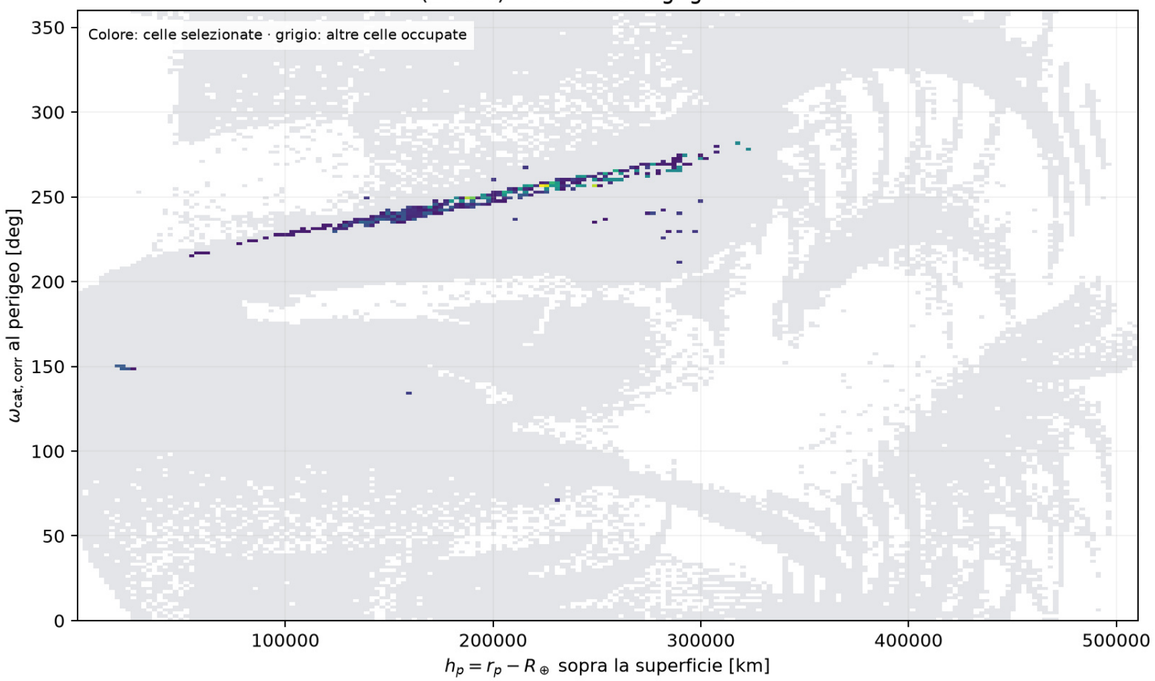

Lunocentrico, assi inerziali — zoom

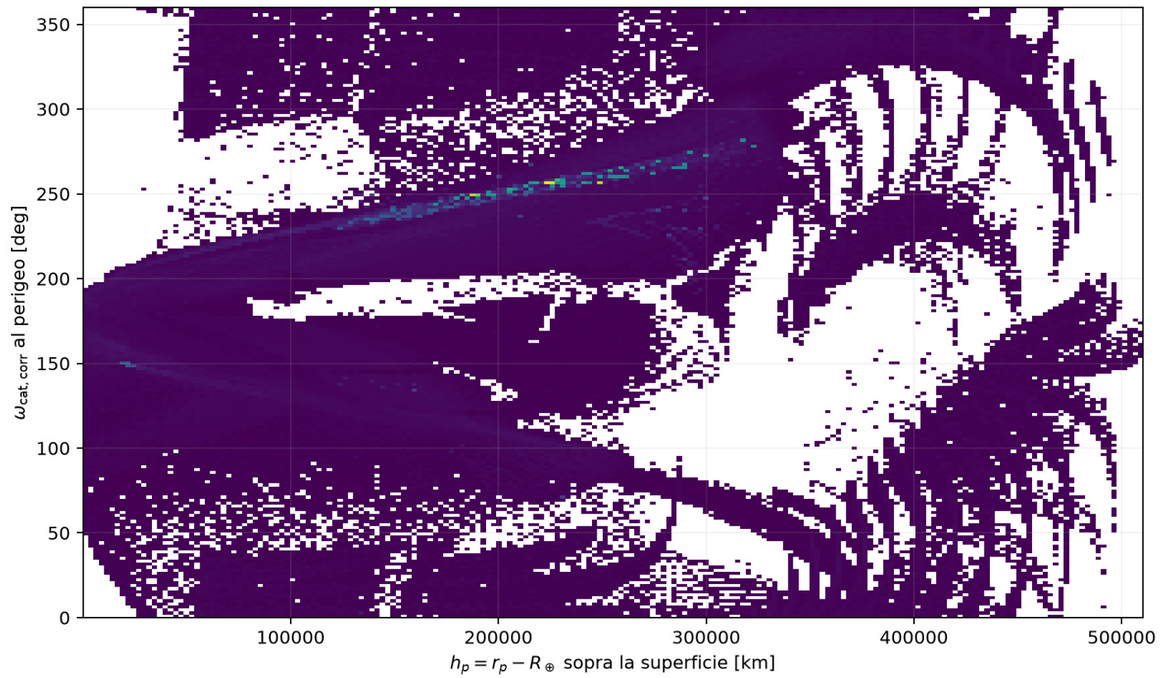

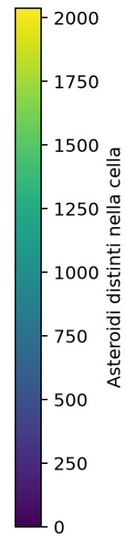

Celle sopra soglia: 261/26015 occupate
(1.00%) · 0.65% della griglia totale

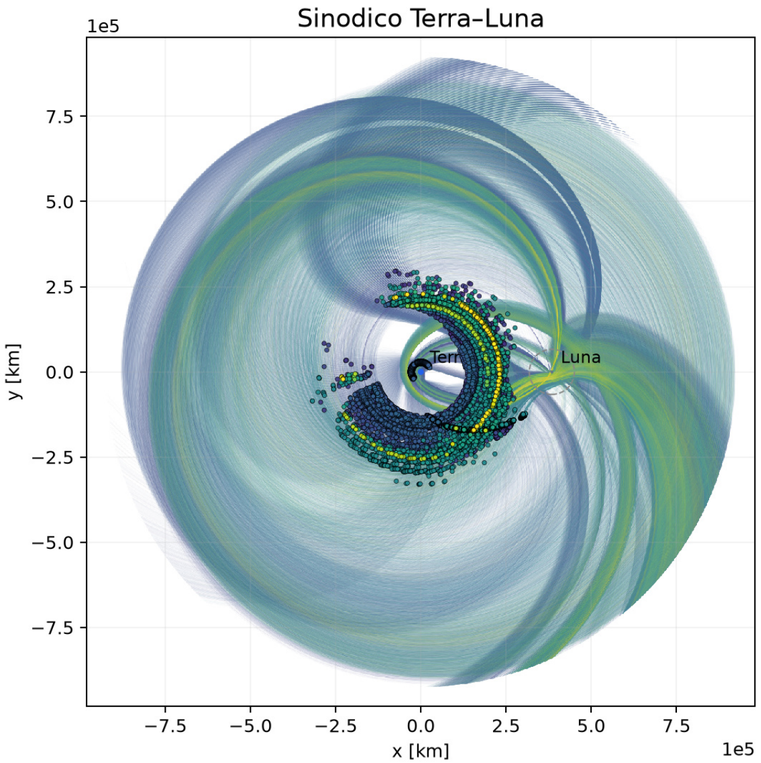

Griglia originale completa
Stessi assi e stessa scala colore della selezione

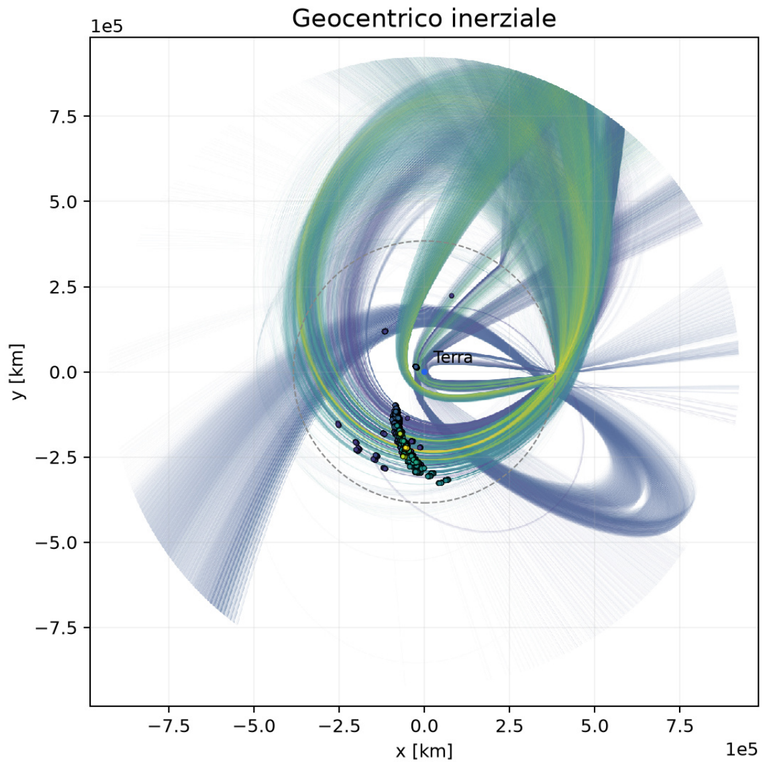

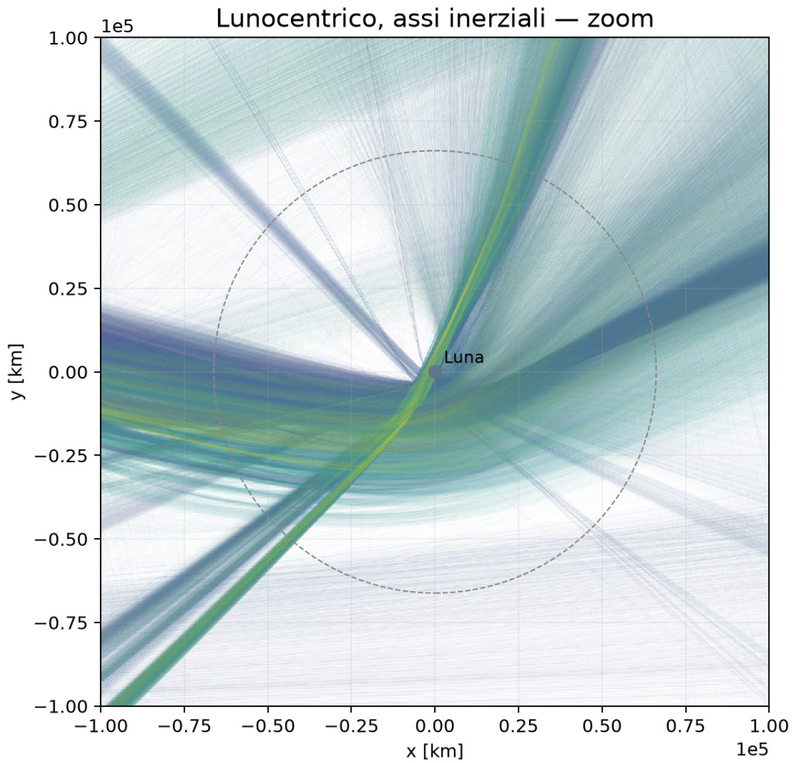

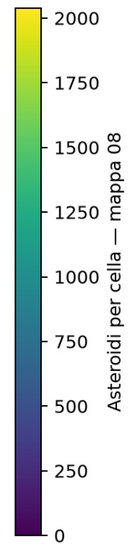

Pallini con bordo nero: perigei salvati, al tempo del perigeo in ciascun riferimento.
Stesse traiettorie e stessi colori nelle tre viste, dal perigeo salvato all'uscita dalla SOI terrestre.
Assi inerziali allineati al sinodico a ETD; nel lunocentrico si sottrae la posizione della Luna a ogni epoca.

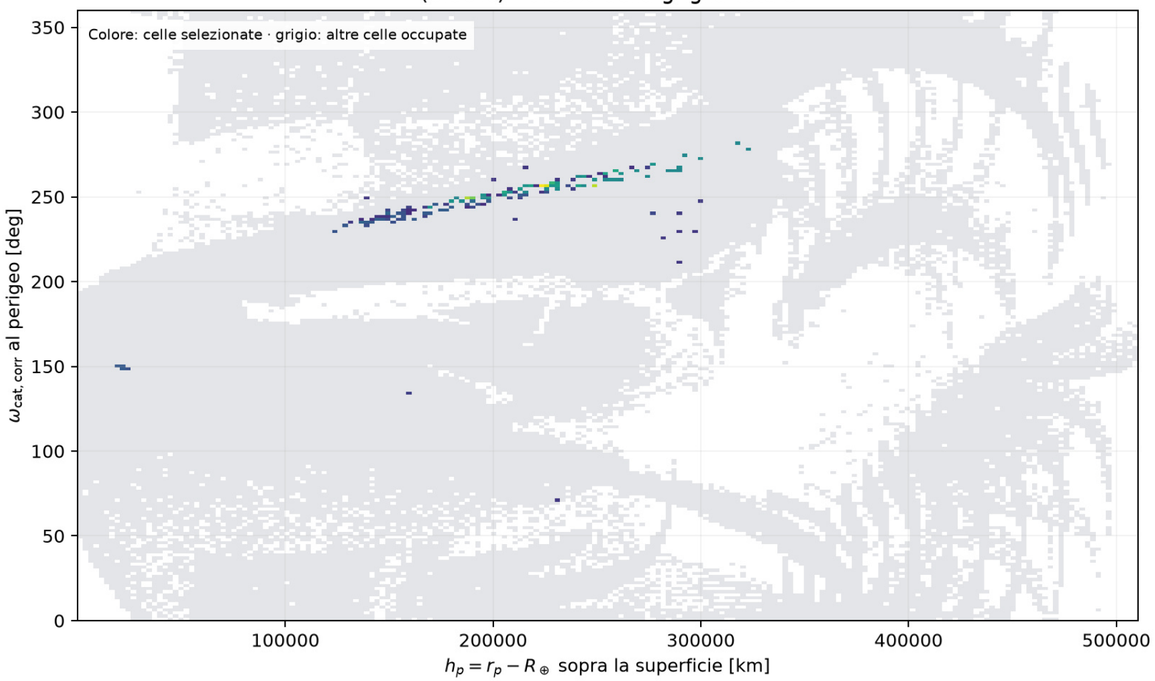

Mappa 08: P99.5 delle celle — almeno 274 asteroidi/cella
41,070 traiettorie distinte · 135 cluster · griglia 200 × 200 · 201 punti per curva · ω del catalogo corretto per il verso

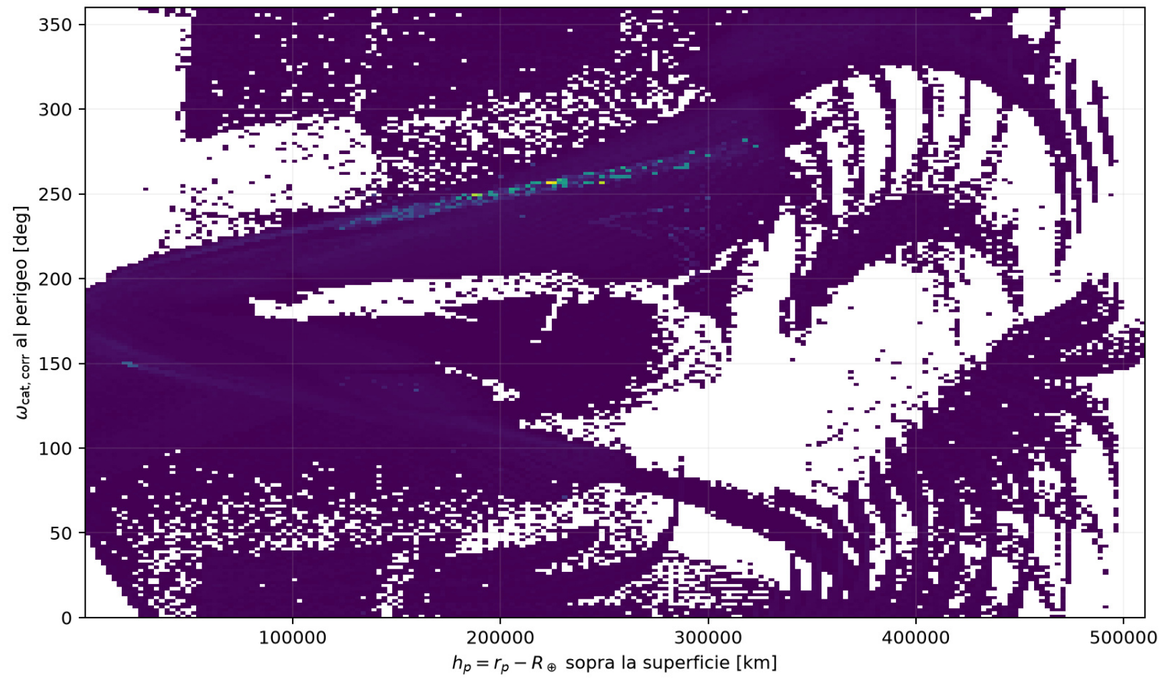

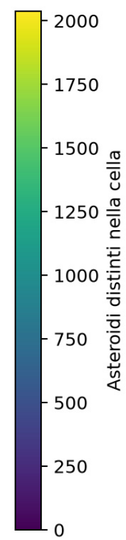

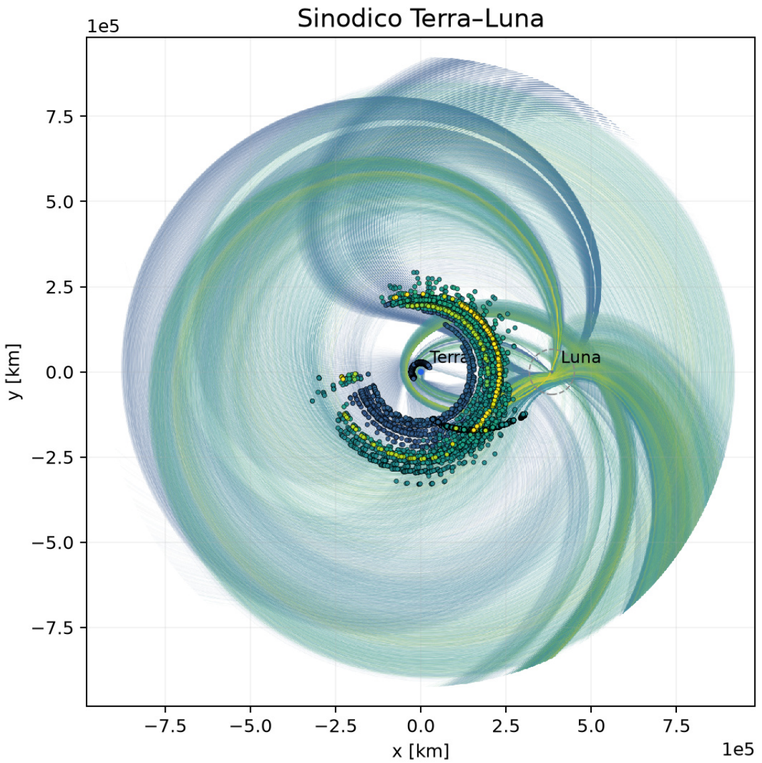

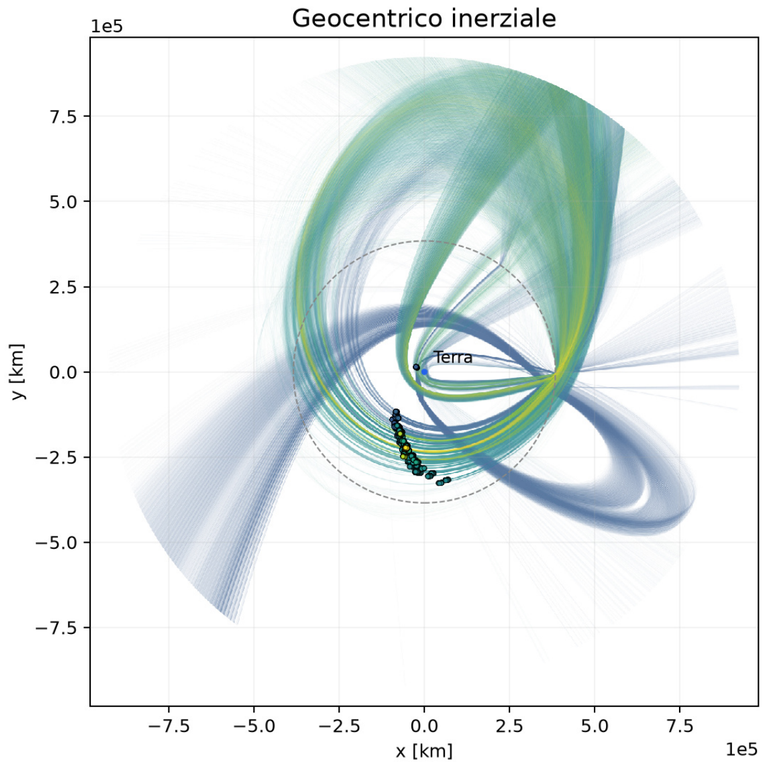

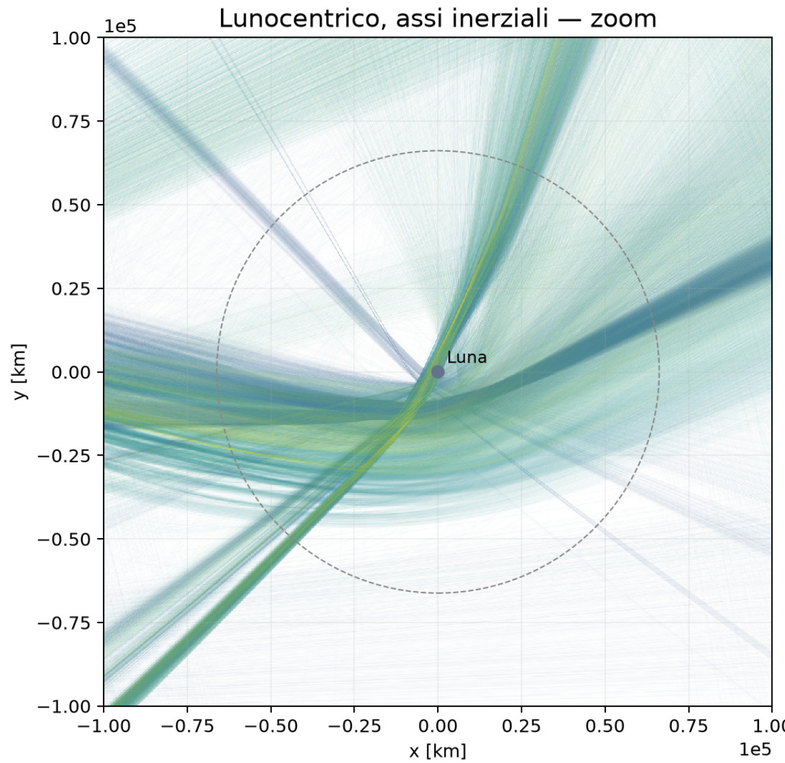

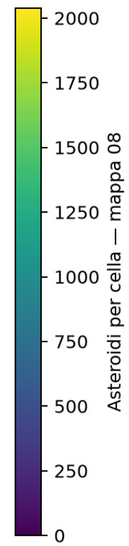

Pallini con bordo nero: perigei salvati, al tempo del perigeo in ciascun riferimento.
Stesse traiettorie e stessi colori nelle tre viste, dal perigeo salvato all'uscita dalla SOI terrestre.
Assi inerziali allineati al sinodico a ETD; nel lunocentrico si sottrae la posizione della Luna a ogni epoca.

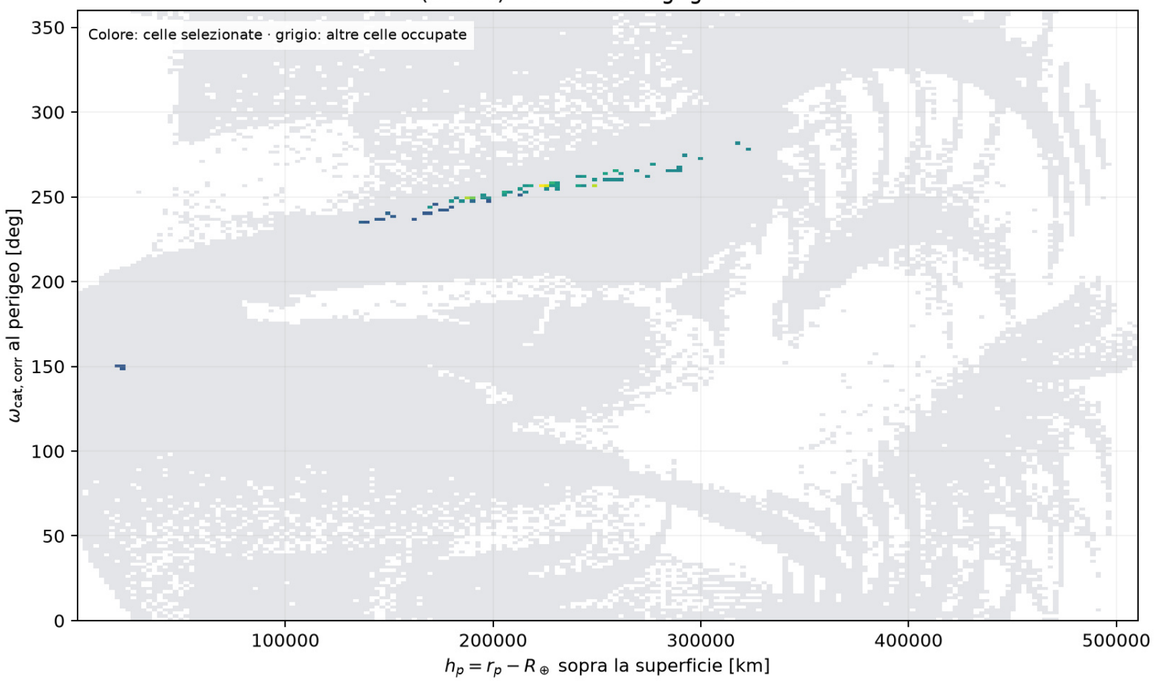

Mappa 08: P99.75 delle celle — almeno 569 asteroidi/cella
23,508 traiettorie distinte · 125 cluster · griglia 200 × 200 · 201 punti per curva · ω del catalogo corretto per il verso

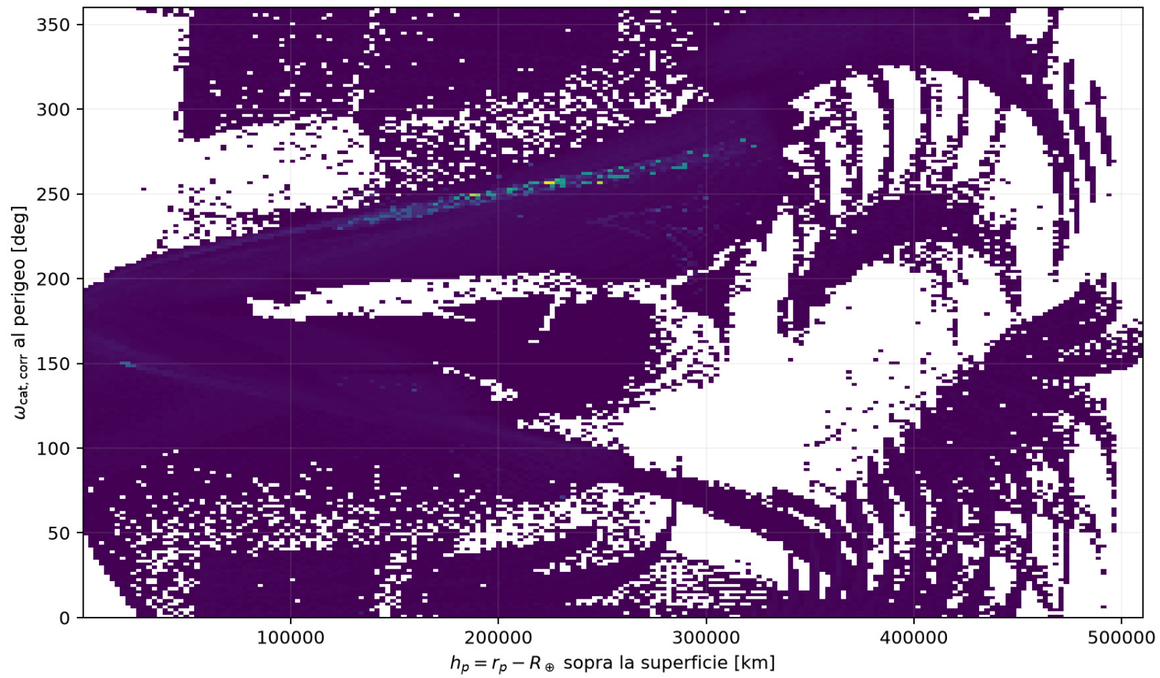

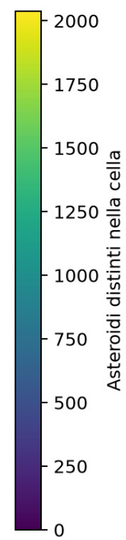

Pallini con bordo nero: perigei salvati, al tempo del perigeo in ciascun riferimento.
Stesse traiettorie e stessi colori nelle tre viste, dal perigeo salvato all'uscita dalla SOI terrestre.
Assi inerziali allineati al sinodico a ETD; nel lunocentrico si sottrae la posizione della Luna a ogni epoca.
